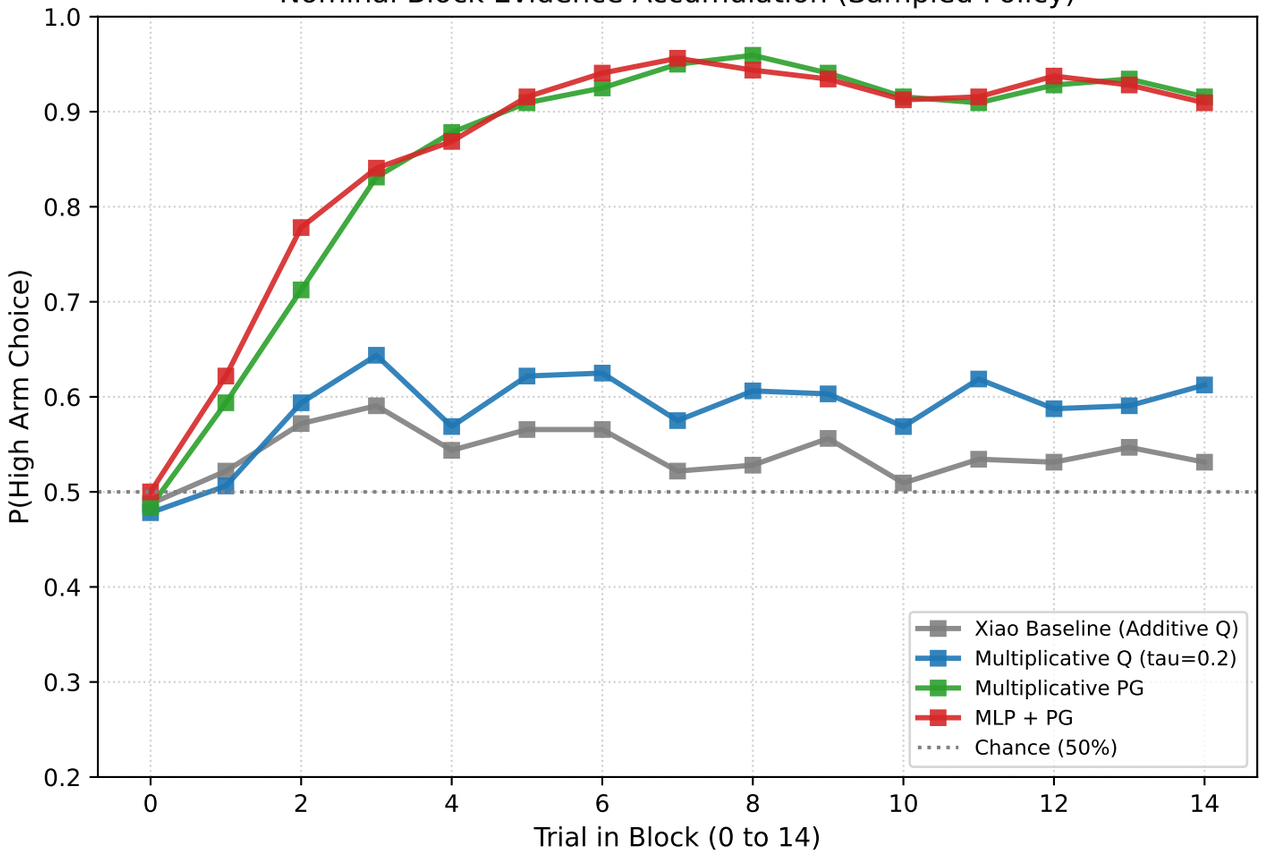
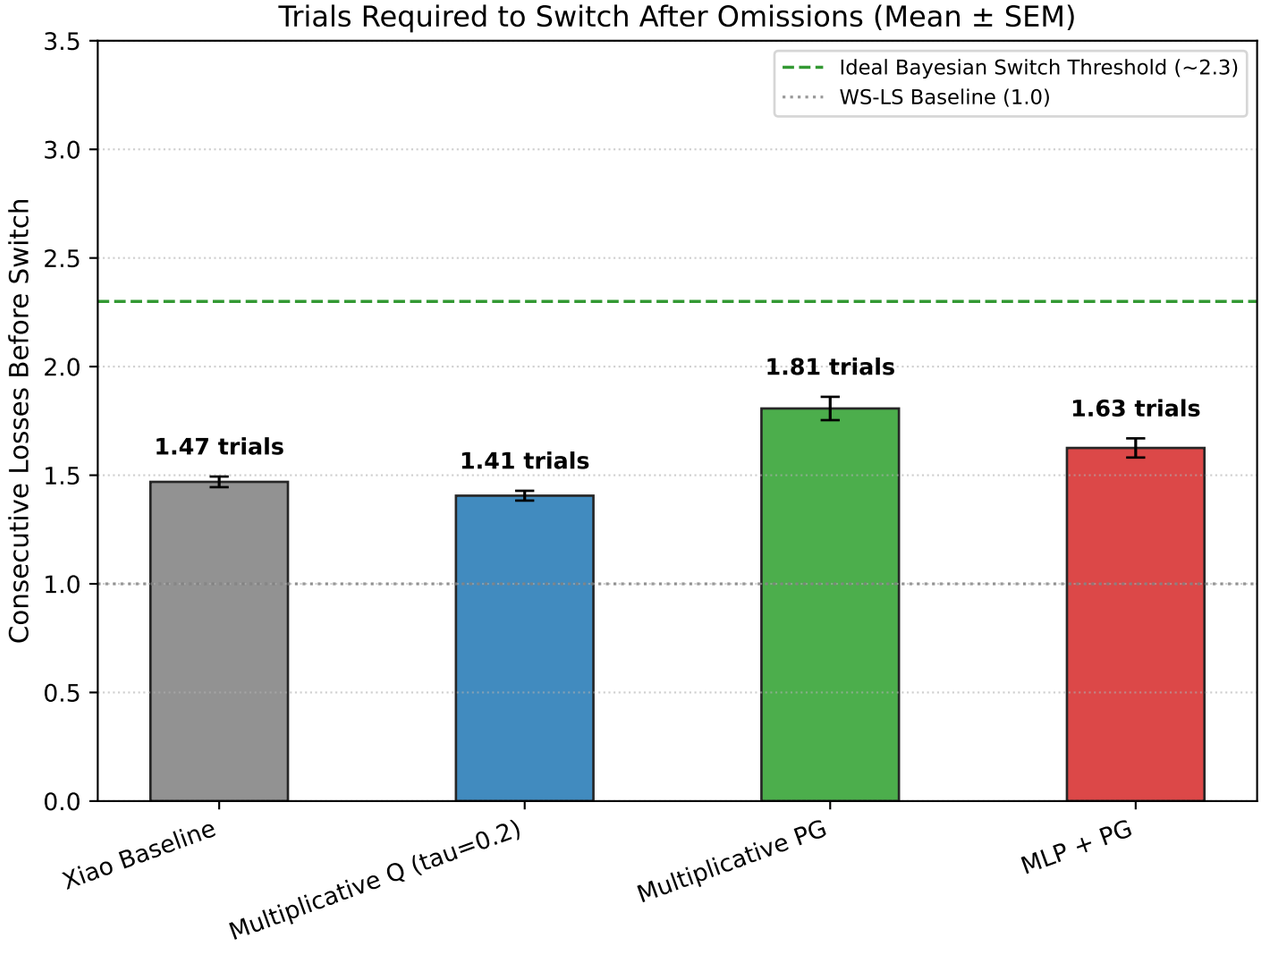
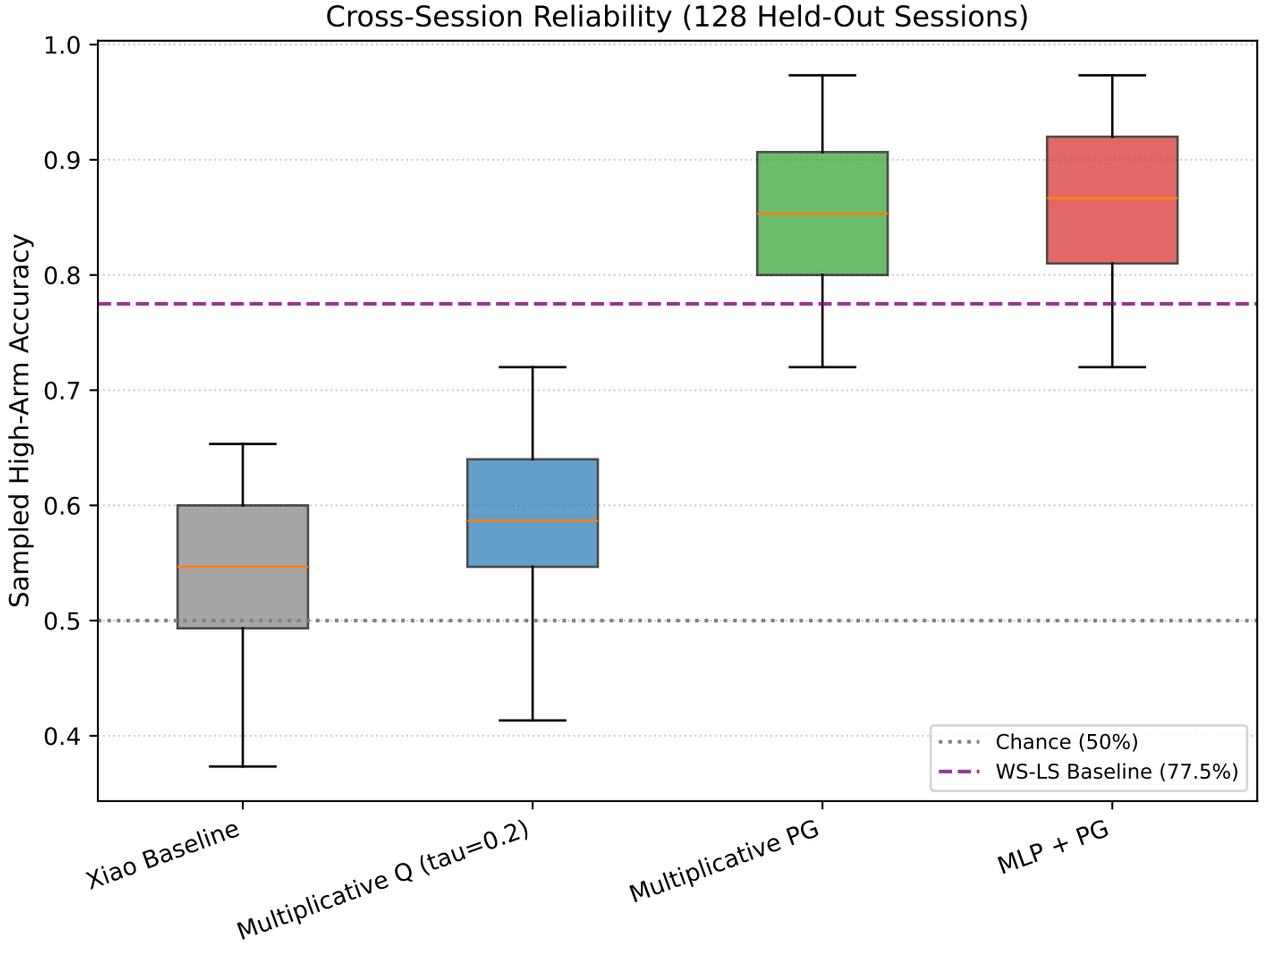
Post-Reversal Adaptation Curve (Sampled Policy)
P(High Arm Choice)
Trials Since Actual Reversal
Xiao Baseline (Additive Q)
Multiplicative Q (tau=0.2)
Multiplicative PG
MLP + PG
Chance (50%)



Nominal Block Evidence Accumulation (Sampled Policy)
P(High Arm Choice)
Trial in Block (0 to 14)
Xiao Baseline (Additive Q)
Multiplicative Q (tau=0.2)
Multiplicative PG
MLP + PG
Chance (50%)



Trials Required to Switch After Omissions (Mean ± SEM)
Consecutive Losses Before Switch
Ideal Bayesian Switch Threshold (~2.3)
WS-LS Baseline (1.0)
1.47 trials
1.41 trials
1.81 trials
1.63 trials
Xiao Baseline
Multiplicative Q (tau=0.2)
Multiplicative PG
MLP + PG



Cross-Session Reliability (128 Held-Out Sessions)
Sampled High-Arm Accuracy
Chance (50%)
WS-LS Baseline (77.5%)
Xiao Baseline
Multiplicative Q (tau=0.2)
Multiplicative PG
MLP + PG
